

B2B ASSOCIATES

Architecture and Forensic Engineering

Our joint work consists in the identification and execution of activities to conceive, organize and manage the whole construction process of a work of architecture or a civil work, through the logical and temporal succession relations, making sure the customer is assured about the overall quality of the work, in line with the estimated time and expediting the activities for optimized efficiency.

All efforts are made so that resources are used based on market forecast and in full compliance with the law.

Architettura ed Ingegneria forense

The forensic Architecture and Engineering are the disciplines that use scientific principles and the analysis methods for the resolution of disputes in the legal field, relying on soft skills, both in technical and in legal matters.

As Appointed Technical Experts (Ctu and/or Ctp) we operate both in the civil and/or criminal judicial proceedings, to assess the reasons for which it started and there was a different performance from that expected (ATP, CTU, Cc, Cp) both under extra-judicial proceedings, to prevent judicial litigation itself (arbitration, mediation, non-judicial expert reports, etc.).

Our fields of intervention are multiple: technical issues related to disputes in public and private construction contracts, execution of works carried out not in a workmanlike, industrial accidents, of components or machine parts, disasters in plants process due to explosions or fires, building collapses, problems related to healthiness' environmental and industrial etc.
